SAITO MASAYUKI**(54) CATALYTIC METAL COLLOID****(57)Abstract:**

PROBLEM TO BE SOLVED: To obtain a catalyst having a high dispersibility and a high NOx- occluding capacity when an alkali metal, an alkali earth metal or a rare earth metal is carried on a catalyst carrier.

SOLUTION: This catalytic metal colloid is used when a process A for carrying an alkali metal, an alkali earth metal or a rare earth metal, and a process B for carrying another chelated catalytic metal are executed as separate processes. When one kind or at least two kinds of catalytic metals to be used in the process B are made colloidal by chelating bond in this case, a certain specific polymer chelating agent is used.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]
